Imaging Result

Name:	MRN:	DOB:
Power, Carole [redacted]	[redacted]	5/30/1943
Procedure(s) Performed:	Accession:	Exam Date
DEXA bone density axial 2 sites	[redacted]	**04/05/2021**
Sex: Female	Patient Class: Outpatient	
Ord Prov and CC Recipients:	Reason for Exam:	
Rajpreet S Dogra	**osteopenia**	

DEXA BONE DENSITOMETRY STUDY 4/5/2021 2:07 PM:

Clinical History: Postmenopausal, osteopenia

Comparison: 4/2/2019

Technique: Bone densitometry is performed over the lumbar spine and unilateral hip. The following values were measured:

REGION	2021 BMD (g/cm2)	T-SCORE	2019	2017
L1-L4	1.038	-1.3	1,012 -1.5	0.990 -1.7
Left Femoral Neck	0.683	-2.6	0.672 -2.6	0.718 -2.3
Total Left Hip	0.726	-2.2	0,683 -2.6	0,728 -2.2

FRAX Score was not calculated. Frax scores are generated when 1) the bone density is within the osteopenia range, 2) the patient is not currently on pharmacologic treatment for osteoporosis and 3) the patient's age is greater [redacted]

When compared to the prior examination there has been a 3% increase in lumbar spine mineralization (not statistically significant) and a 6% increase in total left hip mineralization (statistically significant).
