

Revere Health

Patient: ELAINE

Gender: F

Encounter Date: 01/15/2021

EXAMINATION: DEXA SCAN

CLINICAL INDICATION: Osteoporosis screening

TECHNIQUE: Dual x-ray absorptiometry of the lumbar spine and left femoral neck.

COMPARISON: None

FINDINGS:

LUMBAR SPINE: The T score for the lumbar spine L1-L4 levels is -1.8. The age-matched Z score is 0.

LEFT FEMORAL NECK: The T score for the left femur is -2.5.

IMPRESSION:

* Bone mineral density of the lumbar spine is decreased as defined by the World Health Organization.

* Bone mineral density of the left hip is osteoporotic as defined by the World Health Organization.

* 10 YEAR FRACTURE RISK: Major osteoporotic fracture: 23%; Hip fracture: 4.2%.

REFERENCE:

T score of less than -1.0 corresponds to osteopenia.

T score of less than -2.5 corresponds to osteoporosis.
