

Final, 10/12/2020 10:16am)

Patient Name: MATHEWS, SUSAN

Referring Physician:

Gender: Female

Procedure: DEXA

Exam Date: 10/12/2020 10:16

Age-related osteoporosis w/o current pathological fracture

Status: Final

Facility: Women's Center.

**Bone Density Study**

Machine Brand: GE.

DEXA acquisitions of the lumbar spine and the hip are obtained using a dual energy x-ray densitometer.

**Total Hip:**

Current Findings: 10-12-2020	Compared To Previous:
BMD: 0.769 g/cm <sup>2</sup>	BMD: N/A
T-Score: -1.9	T-Score: N/A
Z-Score: 0.1	Z-Score: N/A

**Lumbar Spine:**

Current Findings: 10-12-2020	Compared To Previous: 10-10-2018
L1-L4 BMD: 0.865 g/cm <sup>2</sup>	L1-L4 BMD: 0.842 g/cm <sup>2</sup>
T-Score: -2.7	T-Score: -2.8
Z-Score: -0.2	Z-Score: -0.4

**Hip Left Femoral Neck:**

Current Findings: 10-12-2020	Compared To Previous: 10-10-2018
BMD: 0.878 g/cm <sup>2</sup>	BMD: 0.814 g/cm <sup>2</sup>
T-Score: -1.2	T-Score: -1.6
Z-Score: 1.0	Z-Score: 0.5

**Impression:**

1. The patient's T-score of the total hip is osteopenic.
2. The patient's T-score of the lumbar spine is osteoporotic.
3. The patient's T-score of the left femoral neck is osteopenic.
4. The ten year probability of a major osteoporotic fracture is 11.9%.

[Redacted signature area]

5. The ten year probability of a hip fracture is 1.5%.

T-score is the patient's BMD as compared to a young adult (age 20). Z-score is the patient's BMD as compared to a patient of the same age and sex.

Normal Bone Density (T-score less than -1.0); Osteopenia (T-score -1.0 to -2.5); Osteoporosis (T-score -2.5 or greater).

The ten year probability of fracture is calculated using the WHO fracture risk assessment tool.
