compression deformity, not calcification.

FINDINGS:

The bone mineral density of the lumbar spine has an overall T-score of -2.0 with a range of -1.73 -2.2. This represents moderate to severe osteopenia and is worse as compared to the prior study. The bone density of the left hip has an overall T-score of -1.3 with a value for the left femoral neck of -1.9. This represents moderate osteopenia which is unchanged from the prior study.

IMPRESSION:

1. Moderate to severe osteopenia as described.
