

### Patient Information

Patient Name	Sex	DOB
Glendenning, V Jane	Female	[REDACTED]

### Exam Information

Status	Exam	Exam
Final [99]	Begun	Ended
	3/16/2017 11:58	3/16/2017 12:20

### Study Result

DEXA Evaluation of the Lumbar Spine and Left Proximal Femur

Reason for Consultation: Osteoporosis screening. Menopause. Evaluation of bone mineral density.

The following absorptiometry data were obtained. The quality of the examination is acceptable with regards to count density, processed images, data display and lack of important artifacts (including but not limited to motion and attenuation artifacts). Serial examination number 1.

L1-L4  
 BMD (g/cm<sup>2</sup>): 1.076  
 Adult T-score: -0.9  
 Adult Z-score: 0.8

Left Femoral Neck  
 BMD (g/cm<sup>2</sup>): 0.827  
 Adult T-score: -1.5  
 Adult Z-score: 0.1

Left Total Hip  
 BMD (g/cm<sup>2</sup>): 0.942  
 Adult T-score: -0.5  
 Adult Z-score: 0.8

=====

### IMPRESSION IMPRESSION:

1. Current findings consistent with moderate osteopenia; there is currently moderate risk for fracture as predicted at the femoral neck
