EXAM: DEXA BONE DENSITOMETRY

INDICATION: Age-related osteoporosis without current pathological fracture.

COMPARISON: RRC 2019

TECHNIQUE: The bone densities of the lumbar spine and the left femoral neck

and hip were determined using dual energy x-ray absorptiometry scanning

(DEXA).

FINDINGS:

Lumbar Spine

Current 2021 BMD (L1 - L4) is 0.825 g/cm² yielding T = -2.0.

Previous 2019 BMD (L1 - L4) is 0.933 g/cm² yielding T = -1.0. 12.57%

Left Femoral Neck

Current 2021 BMD is 0.612 g/cm² yielding T = -2.1.

Previous 2019 BMD is 0.642 g/cm² yielding T = -1.9. 4.57%

Left Total Hip

Current 2021 BMD is 0.783 g/cm² yielding T = -1.3.

Previous 2019 BMD is 0.803 g/cm² yielding T = -1.1. 2.57%
