

BONE DENSITY STUDY

Print

For general information about a test procedure, click the "About this test" link above.

To see more information about a test result, select the "Details" tab. To compare test results over time, click "Past results" or "Graph of past results."

You may see an "A" (for abnormal), "H" or "HH" (for high), or "L" or "LL" (for low) in the "Flag" column. This means the test result is outside the normal range. Results a little bit outside this range are usually of no concern. Your doctor will discuss these results with you.

Study result

Impression

Osteoporosis.

DATA:

T-score AP spine (L1-L4): -2.5
T-score total right hip: -1.9
T-score right femoral neck: -1.9
Right femoral neck BMD: 0.642 g/cm²

Since the previous exam of December 13, 2013, there has been a decrease in the AP spine (L1-L4) BMD of 0.040 g/cm² (-4.9%) and a decrease in right hip BMD of 0.061 g/cm² (-8.0%).

COMMENT:

Treatment indicated based on T-score.

Narrative

EXAM: Bone Mineral Density, Hip(s) & Spine
EXAM DATE AND TIME: 06/26/2018 11:26:00

Dictation by Jason Long, Radiology Practitioner Assistant, under the supervision of Dr. Plunkett.

BONE MINERAL DENSITOMETRY:

EQUIPMENT: Hologic Discovery W QDR (S/N 81544)

INDICATIONS: What happened? When did it occur? Where is the pain?
What are you concerned for? screen postmenopausal

Component results

There is no component information for this result.

General information

Ordered by: Norse R Bear, MD

Collected: 06/26/2018 11:15 AM

Resulted: 06/28/2018 1:24 PM
